

READING: **NEXUS LAYERS OF LEADERSHIP GUIDE**

This reading describes the Nexus “Layers of Leadership” framework designed specifically for museum professionals.

Review this framework to understand the leadership skills, challenges, and roles associated with each “layer” of leadership. You can use this information as a potential source for identifying a leader development goal and/or strategy. This framework is a helpful guide to navigating your career goals within the museum field.

Nexus Leading Across Boundaries (LAB)

Layers of Leadership across Libraries, Archives, and Museums

Nexus LAB: Layers of Leadership across Libraries, Archives, and Museums

Key Roles and Challenges

Role specific skills are developed in each level. Common skills are also developed across all levels.

Nexus LAB: Layers of Leadership across Libraries, Archives, and Museums

Things to Remember

Connections between materials:

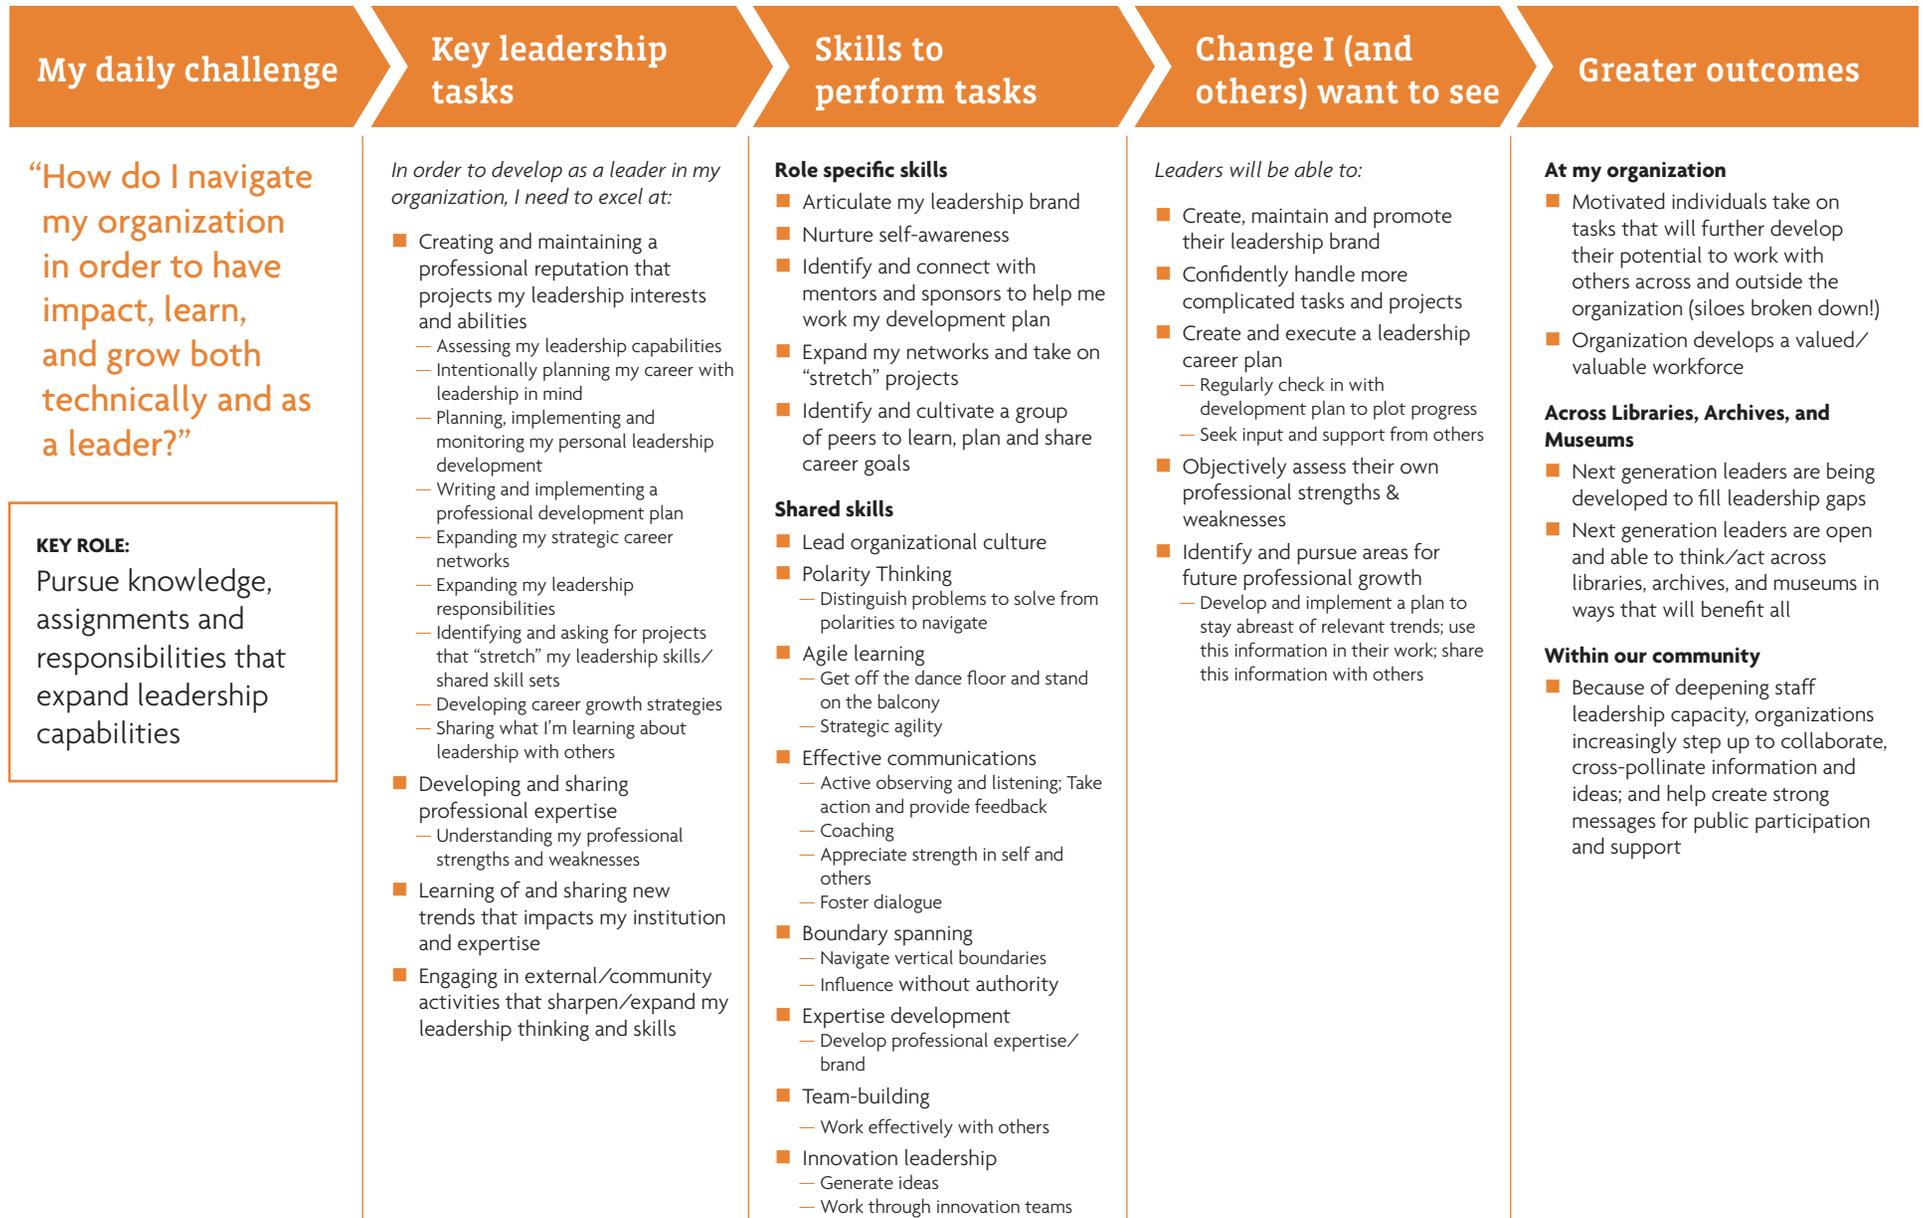

- All six leadership layers, their associated role-specific skills, and their shared skills are depicted on pages one and nine of the Layers of Leadership.
- Each layer is elaborated in pages three to eight. Each layer includes a daily challenge and key role, the key leadership tasks and role-specific skills required by that layer, and the changes and outcomes successful leaders in this layer can expect to experience.
- While some leadership skills are tied to specific layers, others are common skills that are developed across one's career in different ways.
- Most people will experience multiple layers at once in different areas of their lives. These layers are not progressive (e.g., you don't have to master Layer A before engaging in Layer B), but rather are fluid (e.g., you may find that you "lead the organization" at work and also "lead self" in volunteer activities).

Parameters to remember:

- Remember leadership skills are developed across one's lifetime — reflected competencies are suggested milestones.
- Continuing education and professional development events may address one or many of the skills or learning objectives. Single events may also address multiple layers.
- The "Layers of Leadership" have many uses, including the following: 1) by individuals, to consider and gauge the leadership competencies they need at different stages of their work and career; 2) by graduate programs, to help students think about their lifelong learning trajectory for leadership; 3) by trainers, to customize training offerings that meet the competency needs of a specific layer's challenges; 4) by supervisors, to identify competencies needed within their staff and offerings that may address those competencies; 5) by existing training programs, to help construct and/or revise curricular offerings to address different phases of leadership growth; 6) by funders, to identify gaps and/or opportunities in the landscape of offerings; and 7) by trainers and programs to help contextualize and advertise their offerings to specific audiences.
